

Cotton Market Commentary

ICE July futures ended the month of April gaining just over ten cents and kicked off May with a strong session posting new session highs on the close and settling up 1.99 to 84.19 c/lbs. ICE Cert Stock increased by 1,585 bales with the new issued showing up in DFW, Galveston, and Houston. Elsewhere, rain fell across the southern reaches of the US cotton belt including the southwestern corner of the 1-S crop district in West Texas where just over an inch of rain was recorded in Seminole and Lamesa, TX. Last week also brought rain across some parts of the Midsouth but according to the latest US Drought Monitor dated April 28th, 98% of US cotton area remains in drought and we saw only small improvement in a few areas in Arkansas and Mississippi while drought expanded in Georgia and South Carolina. There has been some additional rain since the map update, and more across the southern parts of the cotton belt. After the close, the CFTC Commitment of Traders report dated as of Tuesday's close showed specs as net buyers for the eight consecutive week, albeit with smaller figures. Since the cutoff date of this report, specs have increased their buying pace again.

Date: 4-May-26

	Settlement	Change
Jul'26	84.19	1.99
Dec'26	84.56	1.69
Mar'27	85.26	1.57
May'27	85.42	1.51

We are pleased to offer, subject to reconfirmation/unsold, in c/lb CIF HCMC. Other terms & conditions as per usual contracts. Freight premiums to apply for Hai Phong & Danang. For description sales, any disputes, which be settled amicably will be settled in accordance with International Cotton Association rules where grade and staple are determined by manual classification.
